

Cloud Backup We got it.

Protect your assets from cryptolockers, natural disasters, burglary, etc.

SECURITY IS KEY

Before backing up to our cloud, your files are encrypted with up to AES 256-bit encryption, ensuring no one but you has access to them. The encrypted backup files are then sent over SSH encrypted connection to our servers for safe keeping.

SET IT AND FORGET IT

Once set up the backup software will automatically backup your newly created files every night. A reports panel will give you a clear view of whether your backups completed successfully.

SPEEDY RECOVERY

If your data is too much to quickly recover from our cloud, we will hand-deliver or overnight a copy of your data for you to quickly recover and have your business up and running as swiftly as possible.

BACKUP EFFICIENTLY

You choose what to back up. Either a complete server backup or only the files you really care for. We will de-duplicate, compress and back-up incrementally to be as efficient as possible.

We offer 2 different storage buckets to best fit your business needs.

Small Business bucket – \$15 / 100GB / month*

Large Business bucket – \$100 / 1TB / month*

*A \$35/server/month fee may be applied if you need compatible backup software.
